

# Double protection for clean Driplines

Efficient action in irrigation Driplines.

An innovative solution from  
Metzer, produced under Patent  
#US2009/025013

Pipes and driplines are protected  
from clingy biofilm formation when  
using water with high organic  
content.

## Economical

Decreases maintenance, use  
of substances, and pumping  
energy; increases system's  
durability

## Environmentally Friendly

Decreases use of harmful  
chemicals used to clean  
pipelines (chlorine and  
hydrogen peroxide)

## First Protective Layer

Active ingredient that  
prevents bacteria from settling  
on and clinging to the pipe  
wall, without affecting water  
quality

## Second Protective Layer

Slippery layer on pipe wall  
physically prevents bacterial  
build-up.
